

## Lunch Seminar 12

即刻止血救援：Beriplex® P/N 與 Haemocomplettan® P 的急診實務應用

### Emergency Hemostatic Rescue: Real-World Applications of Beriplex® P/N and Haemocomplettan® P

(本演講由吉發企業股份有限公司贊助)

時間：2025 年 6 月 28 日(六) 12:30~13:30

會議室：403 會議廳

座長：黃獻峰醫師(台北榮總)

講師：陳春廷醫師(台北榮總)

#### 講座簡介

Beriplex® P/N 主成分是 4F-PCC(4-Factor prothrombin complex concentrate)，含有人體的凝血因子(II, VII, IX, X)，是啟動止血機制的重要角色。對於創傷病患，因先天缺乏凝血因子或是消耗過度，造成大量出血不止，都可以補充 4F-PCC 幫助止血。

Haemocomplettan® P 主成分為 Fibrinogen concentrate，Fibrinogen 是人體重要的凝血因子之一，在 Primary Haemostasis 和 Secondary Haemostasis 中均扮演著關鍵角色，在止血過程中會被大量消耗。

本會議的目的在於提高臨床使用者對該產品的認識，使其能成為急診處理出血患者時的重要利器。

Beriplex® P/N contains 4F-PCC (4-Factor Prothrombin Complex Concentrate), which includes human coagulation factors II, VII, IX, and X. These factors play a crucial role in initiating the hemostatic mechanism. For trauma patients experiencing massive uncontrolled bleeding due to congenital coagulation factor deficiency or excessive consumption, supplementation with 4F-PCC can aid in hemostasis.

Haemocomplettan® P contains fibrinogen concentrate, a key coagulation factor that plays a vital role in both primary and secondary hemostasis. During the clotting process, fibrinogen is extensively consumed, making its replenishment essential for effective bleeding control.

This seminar aims to enhance clinical users' understanding of these products so they can become essential tools in managing bleeding patients.
